TITLE: Follow-up response rates

AIM

Calculation of response rates for 6-month, 18-month, 4-year, 7-year and 10-year follow-up questionnaires.

METHODS

For each follow-up questionnaire, we identify the subset of participants for whom at the date of the database download the time of the questionnaire completion was expired (eligible population) and among them we define as respondent a child whose mothers started the completion of the index questionnaire. The response rate is then calculated in the eligible as the ratio of number of respondents over the total number of participants.

In particular completion of the questionnaires expires as follows:

- *6-month follow-up*: more than 24 months from date of conception ;
- *18-month follow-up*: more than 30 months from date of delivery, or if the latter is missing more than 36 months from date of conception;
- *4-year follow-up*: more than 59 months from date of delivery;
- *7-year follow-up*: more than 96 months from date of delivery;
- *10-year follow-up*: more than 132 months from date of delivery.

Twins are followed-up until the 18-month questionnaire and therefore are not part of the eligible population for the 4-, 7- and 10-year follow-up.

RESULTS

Download date	Follow-up response rates				
	6-month	18-month	4-year	7-year	10-year
<i>Jan 2014</i>	87.9%	84.2%	78.3%	73.5%	--
<i>Oct 2014</i>	88.0%	83.1%	77.3%	72.0%	--
<i>Jun 2015</i>	87.9%	82.7%	77.6%	73.4%	--
<i>Feb 2016</i>	88.1%	82.5%	78.2%	73.3%	--
<i>Oct 2016</i>	88.2%	82.4%	77.0%	72.5%	76.3%
<i>Aug 2018</i>	91.7%	83.5%	78.0%	74.5%	66.6%
